

Stay comfortable all year long with industry-leading LGRED° heat technology.

WHAT IS LGRED° HEAT TECHNOLOGY?

LG Air Solutions Products featuring LGRED° heat (Reliable to Extreme Degrees) boast superior performance under challenging conditions. Be toasty warm even in the coldest winter months, when traditional units are unable to keep up with demand. Expect 100% heating capacity down to -15° C and continuous heating operation, even when it's -30° C outside. This increased performance not only delivers heat when traditional models are unable to but also operates with incredible efficiency; making products with LGRED Heat the ideal heating solution for less temperate regions of the country.

WHAT ARE ADVANTAGES OF LG SYSTEMS WITH LGRED° HEAT?

LG Systems with LGRED° offer all of the traditional benefits of LG duct-free and inverter technology while delivering industry-leading heating performance. It is a key performance-enhancing feature of the compact yet powerful LG Multi F and Multi F MAX outdoor units. Created for residential and light commercial installations, these robust multi-zone systems have the option to be installed fully ductless for optimal performance or combined with ducted systems, including the LG 4-Way Vertical Air Handler Units (VAHUs), for increased design flexibility. The Multi F systems with LGRED° also feature a SEER rating of up to 27.5, qualifying them for ENERGY STAR® certification, as well as eligibility for participating local utility company rebates.

LGRED° Heat technology is currently available and ready to order on the following models:

Indoor Unit (IDU)	Outdoor Unit (ODU)
LAN090HYV3	LAU090HYV3
